

Just-in-Time Admin AutoElevate Feature

Experience **unprecedented security and simplicity** with AutoElevate's **Just-in-Time Admin**. Enhance your workstation security, eliminate password risks, and streamline technician access with this game-changing feature.

Temporary and Secure : Just-in-Time Delivery

Every login can generate a new administrator account, allowing for quick and simple administrator access to end user machines. When the technician is done, simply logoff and AutoElevate will delete the administrator user and clean up the registry and user space as though the user never existed.

Enhanced Security

AutoElevate's Just-in-Time Admin transforms your technicians' Windows login process, making it simple and secure. Admins can now log in as local administrators by simply scanning a QR code on the Windows login screen via the AutoElevate MFA enabled Mobile app. There is no longer a need to share sensitive Admin Credentials.

Multi-Factor Authentication (MFA)

AutoElevate's Mobile App helps to secure end user workstations and laptops by optionally enforcing an MFA/2FA authentication process for all Windows administrator logins.

User Flexibility

AutoElevate's Just-in-Time Admin also provides the flexibility to create a persistent local non-interactive account that can be elevated to administrator at the moment of logon if the use case demands it.

Customizable Branding

Create a seamless user experience through AutoElevate's customizable branding feature. Personalize the logon screen with your branded images/logos.
